

Daily & Peer QC Integration from Instrument Manager

Optimize QC with 3rd party QC program integration

Everyone who works in a lab knows that QC can be costly and time-consuming. But QC is a mandatory and essential step to ensure accurate patient results. Unfortunately, it's no secret that instruments can drift over time, creating risk of inaccurate results that can affect patient care.

With labs under increasing pressure to process more results more quickly, it's more important than ever that labs have the right solutions in place to help them optimize workflows across the lab.

With Daily & Peer QC Integration, labs can easily integrate with several preferred QC programs to automatically deliver QC results and receive responses directly back in Instrument Manager. When used in combination with Autoverification from Instrument Manager, labs can define tailored workflows to prevent the release of potentially faulty test results if an instrument has failed QC.

The result? Increased confidence that labs are protecting their patients and their own reputation from the release of erroneous results.

Why Daily & Peer QC Integration?

Prevent release of patient results from failed QC runs with Autoverification integration

Support for industry standard lab QC programs

Enhance Peer Comparison QC insights by comparing all QC results

Simplify and optimize your QC processes

Daily & Peer QC Integration from Instrument Manager (IM) lets your lab maximize the benefit of 3rd party lab QC programs with integrated result delivery, optimized lab workflow, and simplified peer comparison.

- **Protect patients and ensure result accuracy:** When used in combination with Autoverification from Instrument Manager, Daily & Peer QC Integration lets labs define Autoverification workflows that can prevent the release of results generated by instruments which fail QC. Labs can reduce the need for corrected reports, and protect result integrity and the patients who need them.
- **Flexible support for common QC programs:** It's virtually unheard of for two labs to have the same instruments, QC practices and solutions, and workflows. At Data Innovations, we understand that all labs need the flexibility to implement the QC programs that serve their lab best. Daily & Peer QC Integration from IM integrates easily to Thermo Scientific LabLink xL, Bio-Rad QC OnCall™ and Unity Real Time®, Technopath IAMQC, and Codasy QCML (outside of North America).
- **Maximize and enhance the value of Peer QC:** Daily & Peer QC can enhance your Peer Comparison insights and processes. Because Daily & Peer QC submits every QC result to your 3rd party QC program automatically – and into the Peer results pool – labs can compare every QC result to their peers in the pool (versus the monthly or occasional point-in-time comparisons more commonly conducted with Peer QC).
